plurality of modules vary the processing of each of the selected successive packets to correspond with the corresponding XDSL protocol and line code.” The closest prior art, Bremer et al. (US Patent 6,580,785), discloses a method and apparatus for simultaneously providing multiple telephone-type services to all separate addressable POT-type devices on a single wire pair at a user premise. However, Bremer fails to anticipate or render obvious the above quoted limitations of the present application. This renders it allowable.
